Getting Started

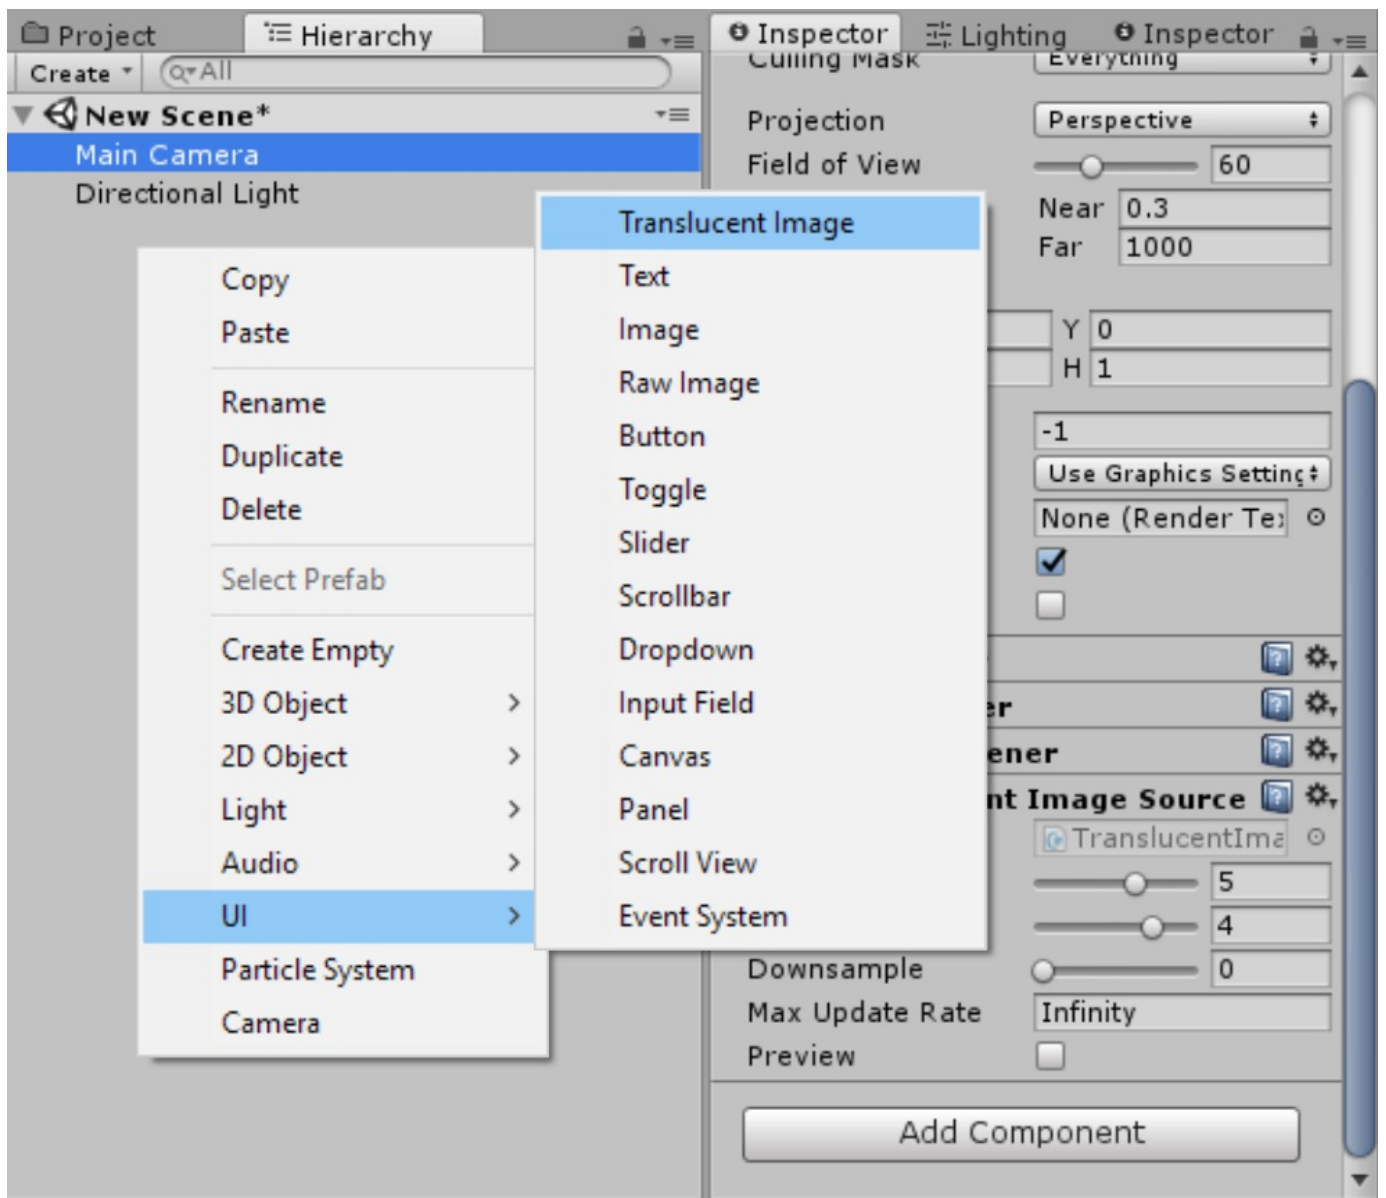

1. Add `Translucent Image Source` to your main camera.

2. Create a **Blur Config** asset, or assign an existing one.

3. Create `UI -> Translucent Image` as you would with normal UI Image.

4. That's it!

> [!NOTE]

> Sometime the effect does not shown up immediately. If that happen, just switch to play mode. The effect will continue to show even when exit play mode.

Customize

Note

This package was designed to be scalable. All properties that was said below to affect performance actually do so very little

There are 2 components that form the effect, both with their own parameter that affect the look of the effect:

Translucent Image Source

This component offers two modes of controlling the amount of blur: *Simple* and *Advanced*:

- **Simple:**
 - **Strength.** Using this single property, you can (kinda) smoothly change the blur amount at runtime.
- **Advanced:**
 - **Size:** How much blurriness you want. Doesn't affect performance, but will look bad if the number too big. Also reduce flickering.
 - **Iteration:** Increase blur quality and blurriness when it is increased.

There are also other properties that are independant of mode:

- **Max Depth:** Increase this property will:
 - Increase flickering when background moving
 - Increase blur level
 - Improve performance
- **Downsample:** Decrease the resolution before processing to increase performance. Side effect include increase blurriness and flickering.
- **Blur Region:** Select the region of the screen to blur. If your UI does not span the entire screen, it might be a good idea to limit this to only the part that you use to increase performance and reduce power usage.

Tip

It easier if you tune the `x` and `y` value before `w` and `h`

- **Max Update Rate:** How many time the effect update itself per second. Use this property to increase performance and decrease power usage. Set to 0 to pause, this can reduce power usage/ prevent overheat when you don't need dynamically updating background - like in a pause menu for example.
- **Preview:** preview the effect in full-screen without creating a Translucent Image

Translucent Image

- **Source Image:** The sprite to use for this image.
- **Material:** Multiple Translucent Image using the same material can only have different color, but they can batch dynamically to only take one draw call.

Warning

Material used here must use the shader `UI/TranslucentImage`

- **Color, Raycast Target, Image Type:** same as built-in Image.
- **Source:** Translucent Image Source component. This is where the image gets the blurred screen. It will automatically being set to the first one found, so you should make sure there one in your scene before creating any Translucent Image. You can always override this to change which camera will be blurred.

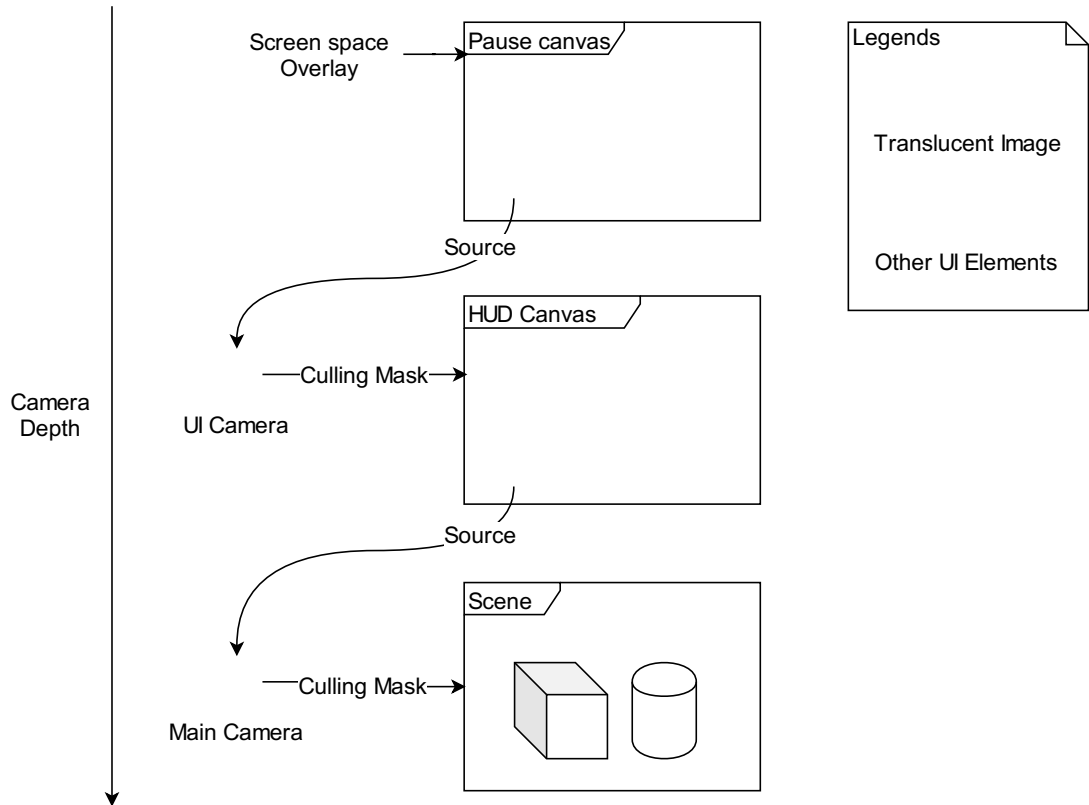

- **Vibrancy:** How colorful you want the background to be, 0 mean black and white, negative value will invert the color. This is great for enhancing the detail behind the image, or making death screen.
- **Brightness:** Brighten or darken the background.
- **Flatten:** Make your Translucent Image more contrast-y against the background. Useful when you can't predict the color of the background.

Blurring other UI elements

Sometimes, you not only want to blur the scene, but also other UI elements. A common use case for this is for pause menu, where the pause menu UIs would be shown on top of the game HUD.

Translucent Image supports this on Standard Render Pipeline. LWRP is not supported for this use case, as the pipeline does not support multiple stacking cameras

The setup

Here is a typical setup:

Example setup

And here a more detailed description of the components you'll need and their settings:

- **Canvas**

- *Overlay Canvas (i.e. pause menu)*

- Layer: UI
 - Render Mode: Screen space - Overlay/Camera
 - Render Camera: Overlay Camera (optional)

- *UI Canvas (i.e. HUD)*

- Layer: UI
 - Render Mode: Screen space - Camera
 - Render Camera: UI Camera

- **Camera**

- *Overlay Camera (optional)*

- Clear Flags: Depth only
 - Culling Mask: UI
 - Depth: 3

- *UI Camera*
 - Clear Flags: Depth only
 - Culling Mask: UI
 - Depth: 2
- *Main Camera*
 - Clear Flags: <any>
 - Culling Mask: Everything but UI
 - Depth: 1

After you have the setup, add the Translucent Image Source component to *UI Camera* and *Main Camera*. Then:

- Assign the Translucent Images "Source" slot to the Source "below" them, like shown in the diagram
- Please note, Translucent Images that use different Sources should also use different Material.

Performance implication

You can add as many cameras and canvases as you like, and set them up similarly. However, with each extra Translucent Image Source you use, the GPU will have to do more work. A workaround is to disable the Source that is not on top. In fact, both Windows 10 and macOS do this.

Windows 10 only use blur on the top-most UI

Why so complicated?

Many other blur solution you can find on the web can just blur whatever behind them. While this is convenient, it also very harmful for performance - each Image has to do their own blurring.

In Translucent Image, the blurring work is batched using Translucent Image Source(s). This massively reduces the amount of calculation the have to be done, especially when there's a lot of UIs.

The trade-off is when we want to blur other Translucent Images, we need to use extra "batches", which involve complex setup and more cost in performance.

LWRP

Requirements

LWRP support was tested with LWRP version `5.7.2`. LWRP on Unity 2018 is not supported, as it is still a preview package.

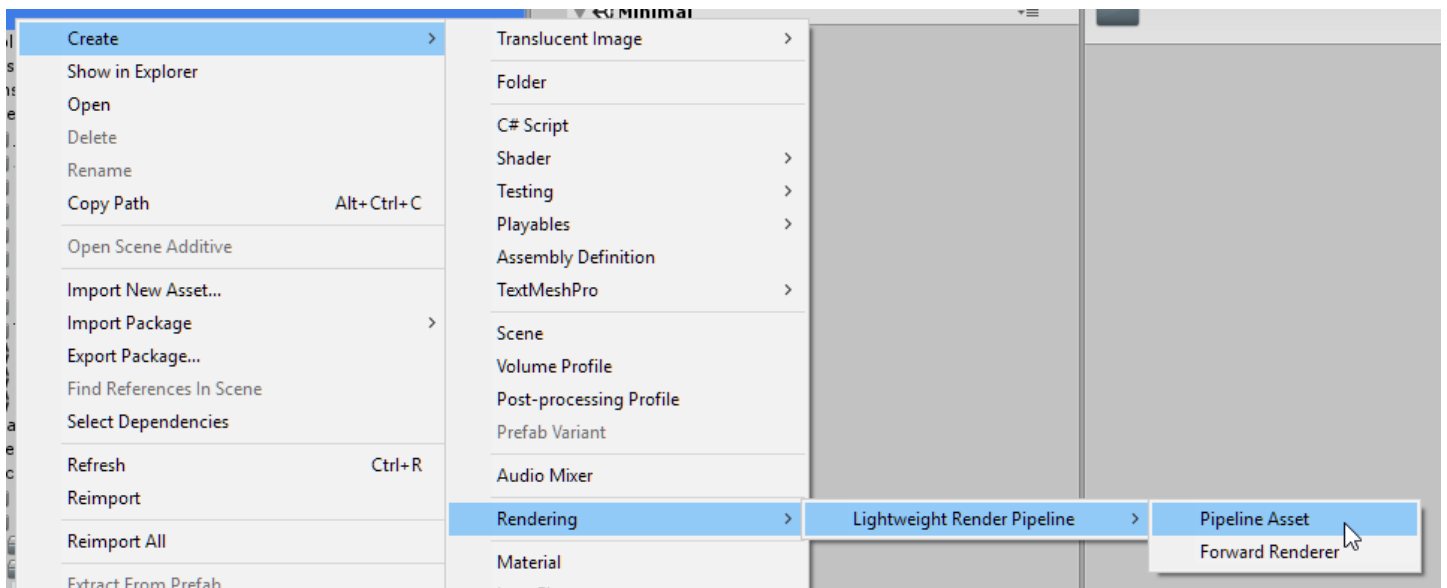

The files required for LWRP support can be found by importing the unity package at:

`Assets/Le Tai's Asset/TranslucentImage/LWRP support`. They are not included by default since they would cause errors for projects without the LWRP package.

Tutorial

First, we need an **LWRP Pipeline asset** that you can control. You might already set up one for other purposes, in which case, you can skip the next 2 steps.

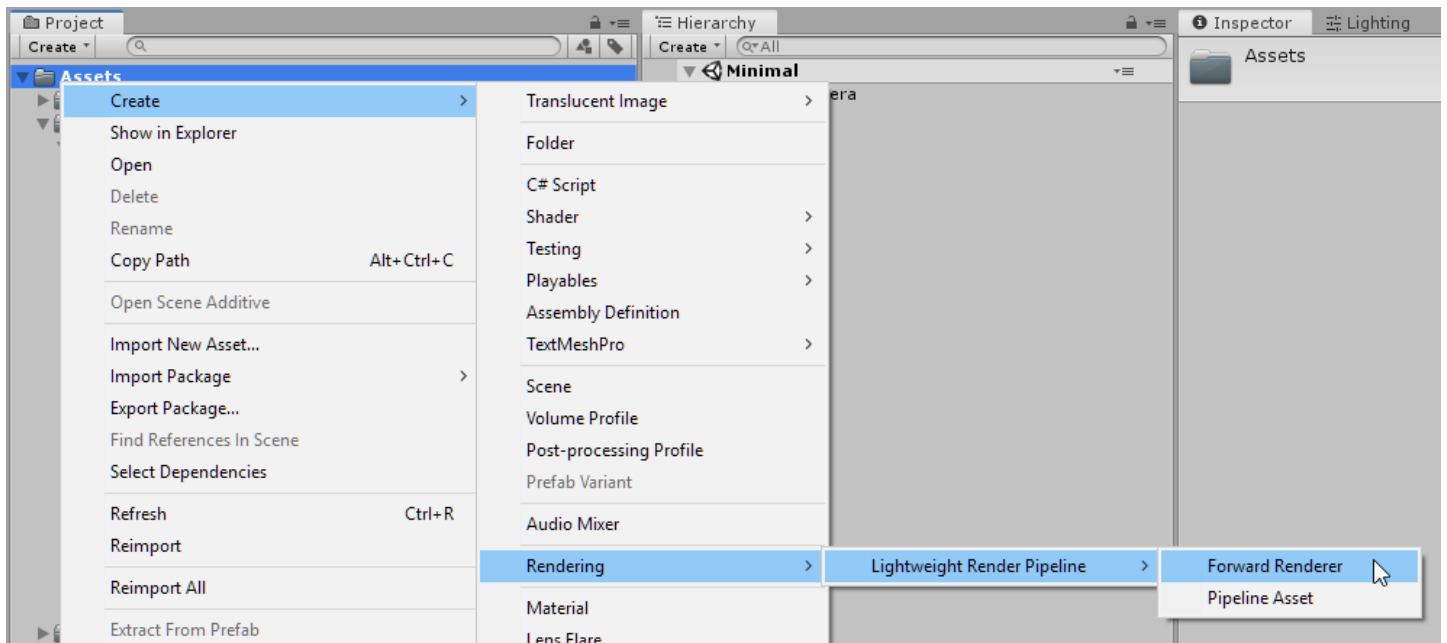

Start by creating an **LWRP Pipeline asset** like so:

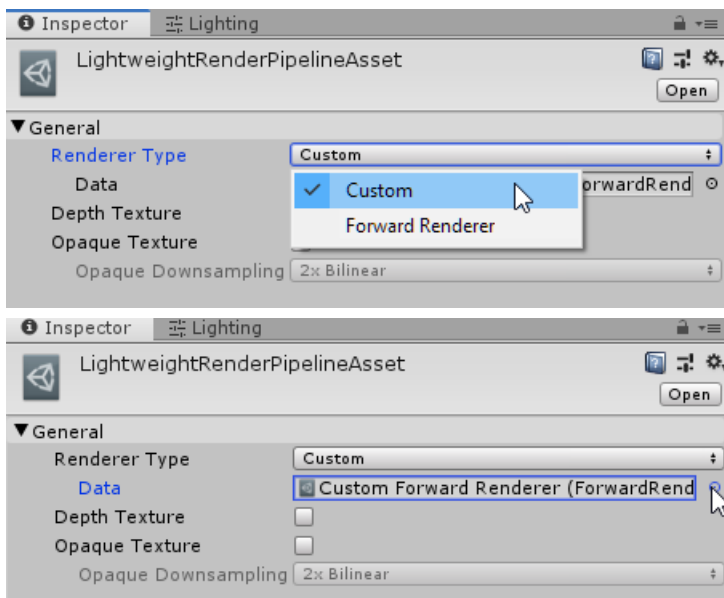

Then assign it to your **Graphics Settings**:

Next, you need a Custom **Forward Renderer** Asset. You might also have this already, if not, create one:

And assign it to the **LWRPipeline asset** you just created:

Last, add **Translucent Image Blur Source** as a **Render Feature** of your Custom **Forward Renderer**

Limitations

LWRP does not support multiple cameras overlay each other. Consequently, multiple blur layers for Translucent Images are also not available.

Only the **Minimal** Demo scenes work in LWRP project for now, as the material used in other scenes is from the standard pipeline, and the main Demo scene uses multiple cameras, which is also not supported by LWRP.

Frequently Asked Questions

Will this asset works well on my device?

The asset should run on any device. Performance wise, it depends on your project, but here some general rule of thumb:

- PC/Mac/Console: Should run well on everything.
- Android: There's too many of them with too much difference in power. The only way to know for sure is to test the demo on your target devices. On the Samsung Galaxy S7 Edge, the demo run at 60FPS at any setting.
- IOS: Apple A8 and later should hit 60FPS. A7 can hit 30FPS.

Can I smoothly animate the blur level?

The strength property allows for some smoothness, but not fully, no. If you just need to fade in and out, use the alpha value of the Color. You can also use Canvas Group as normal Images.

Explanation

If the blur algorithm runs once for each UI on the screen, it will get too slow very fast. In fact, if you use a Mac or Window 10 computer, you will notice the blur effect is disabled for windows that aren't in focus.

Therefore, the blurring is done once per camera. This gives us a much higher performance. However, every TranslucentImage share the same source will have the exact same background - which means they will not "see" others below them.

Have another question?

public class ScalableBlurConfig : BlurConfig
```

Properties

Iteration

Half the number of time to process the image. It is half because the real number of iteration must always be even. Using half also makes calculation simpler

Declaration

```
public int Iteration { get; set; }
```

Property Value

TYPE	DESCRIPTION
System.Int32	Must be non-negative

MaxDepth

Clamp the minimum size of the intermediate texture. Reduce flickering and blur

Declaration

```
public int MaxDepth { get; set; }
```

Property Value

TYPE	DESCRIPTION
System.Int32	Must be larger than 0

Radius

Distance between the base texel and the texel to be sampled.

Declaration

```
public float Radius { get; set; }
```

Property Value

TYPE	DESCRIPTION
System.Single	

Strength

User friendly property to control the amount of blur

Declaration

```
public float Strength { get; set; }
```

Property Value

TYPE	DESCRIPTION
System.Single	Must be non-negative

Methods

SetAdvancedFieldFromSimple()

Calculate size and iteration from strength

Declaration

```
protected virtual void SetAdvancedFieldFromSimple()
```

System.Object.GetType()
System.Object.MemberwiseClone()
System.Object.ReferenceEquals(System.Object, System.Object)

Namespace: [LeTai.Asset.TranslucentImage](#)

Assembly: LeTai.TranslucentImage.dll

Syntax

```
public class TranslucentImage : Image, ICanvasElement, IClippable, IMaskable, IMaterialModifier, ISerializationCallbackReceiver, ILayoutElement, ICanvasRaycastFilter, IMeshModifier
```

Fields

brightness

Brighten/darken them image

Declaration

```
[Tooltip("Brighten/darken them image")]  
[Range(-1F, 1F)]  
public float brightness
```

Field Value

TYPE	DESCRIPTION
System.Single	

flatten

Flatten the color behind to help keep contrast on varying background

Declaration

```
[Tooltip("Flatten the color behind to help keep contrast on varying background")]  
[Range(0F, 1F)]  
public float flatten
```

Field Value

TYPE	DESCRIPTION
System.Single	

source

Source of blur for this image

Declaration

public TranslucentImageSource source

Field Value

TYPE	DESCRIPTION
TranslucentImageSource	

spriteBlending

Declaration

[Tooltip("Blend between the sprite and background blur")]
[Range(0F, 1F)]
public float spriteBlending

Field Value

TYPE	DESCRIPTION
System.Single	

vibrancy

(De)Saturate them image, 1 is normal, 0 is grey scale, below zero make the image negative

Declaration

[Tooltip("(De)Saturate them image, 1 is normal, 0 is black and white, below zero make the image negative")]
[Range(-1F, 3F)]
public float vibrancy

Field Value

TYPE	DESCRIPTION
System.Single	

Methods

ModifyMesh(Mesh)

Declaration

public virtual void ModifyMesh(Mesh mesh)

Parameters

TYPE	NAME	DESCRIPTION
UnityEngine.Mesh	mesh	

ModifyMesh(VertexHelper)

Declaration

public virtual void ModifyMesh(VertexHelper vh)

Parameters

TYPE	NAME	DESCRIPTION
UnityEngine.UI.VertexHelper	vh	

OnDidApplyAnimationProperties()

Declaration

```
protected override void OnDidApplyAnimationProperties()
```

Overrides

UnityEngine.UI.Graphic.OnDidApplyAnimationProperties()

OnDisable()

Declaration

```
protected override void OnDisable()
```

Overrides

UnityEngine.UI.Image.OnDisable()

OnEnable()

Declaration

```
protected override void OnEnable()
```

Overrides

UnityEngine.UI.Image.OnEnable()

Start()

Declaration

```
protected override void Start()
```

Overrides

UnityEngine.EventSystems.UIBehaviour.Start()

Implements

- UnityEngine.UI.ICanvasElement
- UnityEngine.UI.IClippable
- UnityEngine.UI.IMaskable
- UnityEngine.UI.IMaterialModifier
- UnityEngine.ISerializationCallbackReceiver
- UnityEngine.UI.ILayoutElement
- UnityEngine.ICanvasRaycastFilter
- UnityEngine.UI.IMeshModifier

Class TranslucentImageSource

Common source of blur for Translucent Images.

Inheritance

System.Object

System.Object.ReferenceEquals(System.Object, System.Object)

Namespace: [LeTai.Asset.TranslucentImage](#)
Assembly: LeTai.TranslucentImage.dll

Syntax

```
[ExecuteInEditMode]
[RequireComponent(typeof(Camera))]
[AddComponentMenu("Image Effects/Tai Le Assets/Translucent Image Source")]
public class TranslucentImageSource : MonoBehaviour
```

Remarks

It is an Image effect that blur the render target of the Camera it attached to, then save the result to a global read-only Render Texture

Fields

maxUpdateRate

Maximum number of times to update the blurred image each second

Declaration

```
public float maxUpdateRate
```

Field Value

TYPE	DESCRIPTION
System.Single	

preview

Render the blurred result to the render target

Declaration

```
public bool preview
```

Field Value

TYPE	DESCRIPTION
System.Boolean	

Properties

BlurAlgorithmSelection

Declaration

```
public BlurAlgorithmType BlurAlgorithmSelection { get; set; }
```

Property Value

TYPE	DESCRIPTION
BlurAlgorithmType	

BlurConfig

Declaration

```
public BlurConfig BlurConfig { get; set; }
```

Property Value

TYPE	DESCRIPTION
BlurConfig	

BlurredScreen

Result of the image effect. Translucent Image use this as their content (read-only)

Declaration

```
public RenderTexture BlurredScreen { get; set; }
```

Property Value

TYPE	DESCRIPTION
UnityEngine.RenderTexture	

BlurRegion

Define the rectangular area on screen that will be blurred.

Declaration

```
public Rect BlurRegion { get; set; }
```

Property Value

TYPE	DESCRIPTION
UnityEngine.Rect	Between 0 and 1

Downsample

The rendered image will be shrunk by a factor of 2^{this} before blurring to reduce processing time

Declaration

```
public int Downsample { get; set; }
```

Property Value

TYPE	DESCRIPTION
System.Int32	Must be non-negative. Default to 0

Methods

Awake()

Declaration

```
protected virtual void Awake()
```

CreateNewBlurredScreen()

Declaration

```
protected virtual void CreateNewBlurredScreen()
```

OnRenderImage(RenderTexture, RenderTexture)

Declaration

```
protected virtual void OnRenderImage(RenderTexture source, RenderTexture destination)
```

Parameters

TYPE	NAME	DESCRIPTION
UnityEngine.RenderTexture	source	
UnityEngine.RenderTexture	destination	

shouldUpdateBlur()

Declaration

```
public bool shouldUpdateBlur()
```

Returns

TYPE	DESCRIPTION
System.Boolean	

Start()

Declaration

```
protected virtual void Start()
```

```

Methods

Blur(CommandBuffer, RenderTargetIdentifier, Rect, RenderTexture)

Declaration

```
public void Blur(CommandBuffer cmd, RenderTargetIdentifier src, Rect srcCropRegion, RenderTexture target)
```

Parameters

TYPE	NAME	DESCRIPTION
UnityEngine.Rendering.CommandBuffer	cmd	
UnityEngine.Rendering.RenderTargetIdentifier	src	
UnityEngine.Rect	srcCropRegion	
UnityEngine.RenderTexture	target	

BlurAtDepth(CommandBuffer, Int32, RenderTexture)

Declaration

```
protected virtual void BlurAtDepth(CommandBuffer cmd, int depth, RenderTexture baseTexture)
```

Parameters

TYPE	NAME	DESCRIPTION
UnityEngine.Rendering.CommandBuffer	cmd	
System.Int32	depth	

TYPE	NAME	DESCRIPTION
UnityEngine.RenderTexture	baseTexture	

ConfigMaterial(Single, Vector4)

Declaration

```
protected void ConfigMaterial(float radius, Vector4 cropRegion)
```

Parameters

TYPE	NAME	DESCRIPTION
System.Single	radius	
UnityEngine.Vector4	cropRegion	

Init(BlurConfig)

Declaration

```
public void Init(BlurConfig config)
```

Parameters

TYPE	NAME	DESCRIPTION
BlurConfig	config

Syntax

```
public class TranslucentImageBlurSource : ScriptableRendererFeature
```

Methods

AddRenderPasses(ScriptableRenderer, ref RenderingData)

Declaration

```
public override void AddRenderPasses(ScriptableRenderer renderer, ref RenderingData renderingData)
```

Parameters

TYPE	NAME	DESCRIPTION
UnityEngine.Rendering.LWRP.ScriptableRenderer	renderer	
UnityEngine.Rendering.LWRP.RenderingData	renderingData	

Overrides

UnityEngine.Rendering.LWRP.ScriptableRendererFeature.AddRenderPasses(UnityEngine.Rendering.LWRP.ScriptableRenderer, UnityEngine.Rendering.LWRP.RenderingData)

Create()

Declaration

```
public override void Create()
```

Overrides

UnityEngine.Rendering.LWRP.ScriptableRendererFeature.Create()

RegisterSource(TranslucentImageSource)

When adding new Translucent Image Source to existing Camera at run time, the new Source must be registered here

Declaration

```
public void RegisterSource(TranslucentImageSource source)
```

Parameters

TYPE	NAME	DESCRIPTION
TranslucentImageSource	source
